A Decade of Regional Traffic Counts 1982 - 1992

Regional Data Center
Research Report
\$15.00

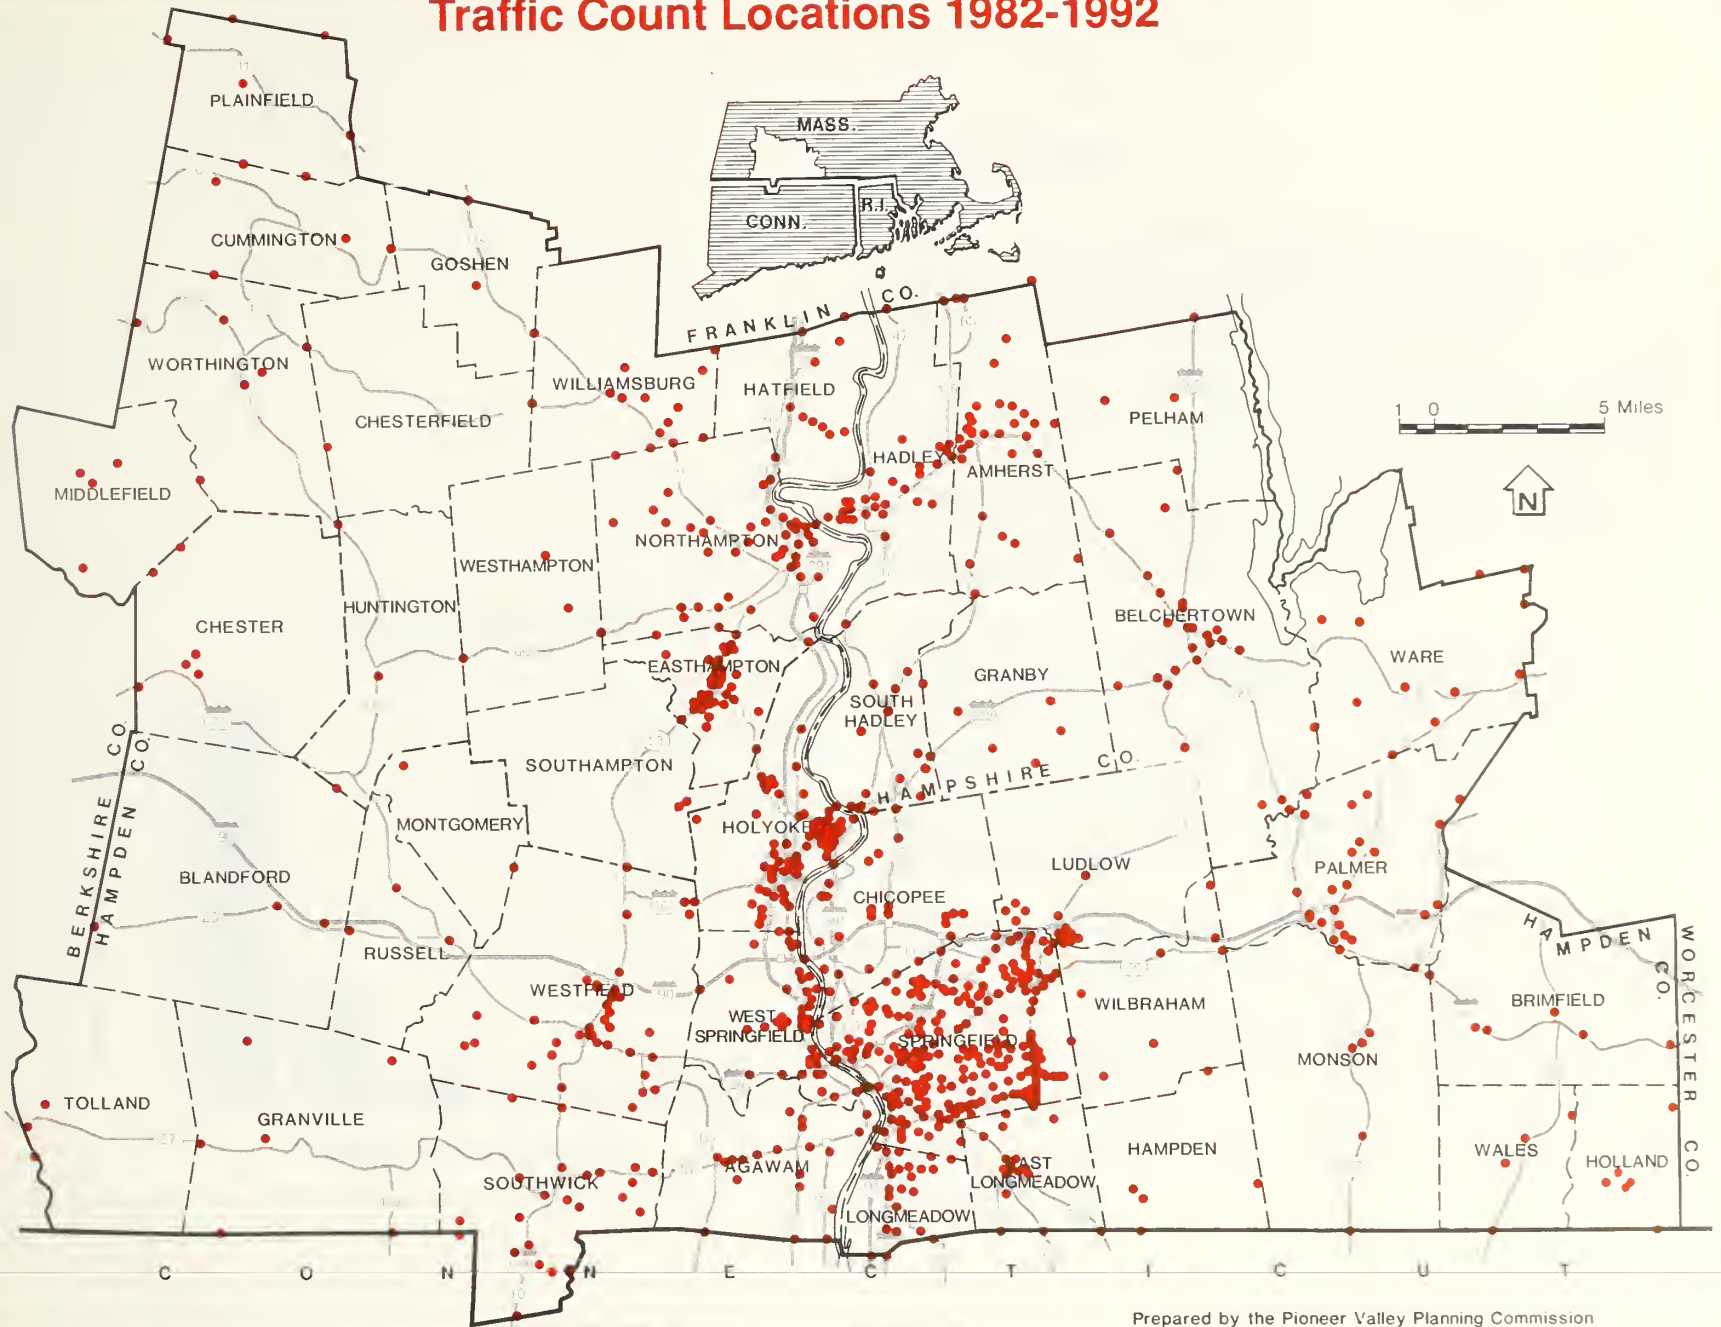

December 1992

Pioneer Valley Planning Commission
26 Central Street
West Springfield, MA 01089

Telephone: (413) 781-6045
Fax: (413) 732-2593

This report was financed through the Massachusetts Department of Public Works
with assistance of the Federal Highway Administration.

Traffic Count Locations 1982-1992

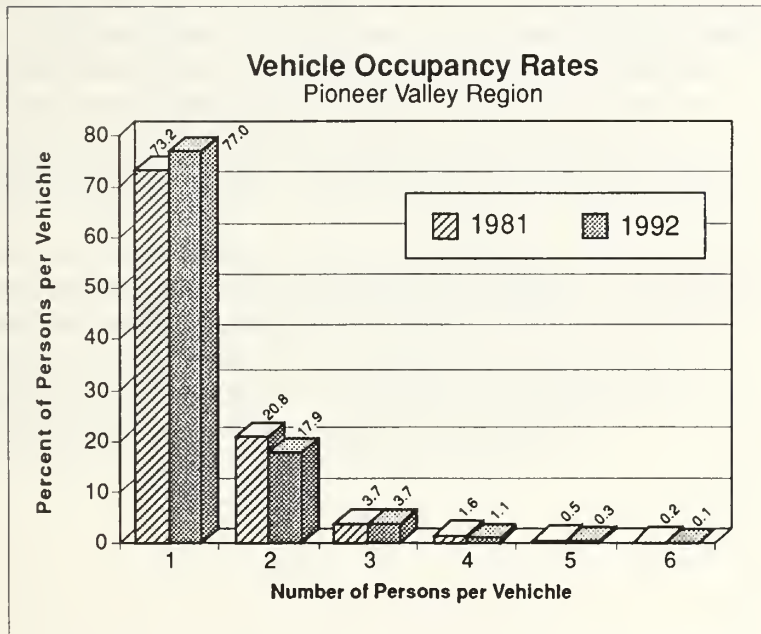

Introduction

Each year, the Pioneer Valley Planning Commission, conducts a traffic counting program on behalf of the Massachusetts Highway Department (MHD), and for the region's cities and towns.

This report, *A DECADE OF REGIONAL TRAFFIC COUNTS*, is a compilation of average daily traffic (ADT) in numerous locations throughout the 43 municipalities in Hampden and Hampshire Counties of Massachusetts. The region encompasses the fourth largest metropolitan area in New England with a 1990 population of 602,878 people. Containing an area of 1,179 square miles, it is approximately the size of the State of Rhode Island.

The Pioneer Valley Planning Commission maintains an extensive database related to traffic and transportation issues. In addition to collecting vehicle volume, speed and classification data, PVPC also performs specialized studies to gather site specific information or to identify regional trends. One example is the 1992 Vehicle Occupancy Study, which identified commuting activity in comparison to data previously collected in 1981, the highlights of which follow.

In 1981, approximately 79% of the vehicles counted had only one occupant. This percentage increased in 1992 to approximately 88%. The morning peak commuting hour (8:00 - 9:00 AM) saw a significant decrease in vehicle occupancy from 1981 to 1992. The average occupancy rate calculated for all 1981 sites combined, referred to as the "Study Area Summary", was 1.28 persons per vehicle. The morning peak vehicle occupancy rate for 1992 dropped to 1.14 persons per vehicle.

The trips made in the morning, before 10:00 AM, are primarily work related. The decrease in the above-mentioned occupancy rate and the corresponding increase in single occupant vehicles is supported by comparing these trends to 1980 and 1990 US Census "Journey -To-Work" information, which indicate that the percentage of people in the Pioneer Valley Region who drove alone increased by 10.64%. At the same time, the percentage of people indicating participation in carpooling decreased by 8.04% from 1980 levels.

The average vehicle occupancy rate for the Pioneer Valley Region during the afternoon peak period of 4:00 - 5:00 o'clock was 1.42 persons in 1981. In 1992 this declined to an average rate of 1.37 persons per vehicle, or a decrease of 3.57%. The decrease in afternoon vehicle occupancy resulting from more people driving to work alone was likely offset to some degree by growth in commercial development along the region's corridors. This may be a factor since shopping trips, appointments, etc., tend to be made with multiple occupants more frequently than regular commuting trips.

Within the Pioneer Valley Region are six permanent ADT monitoring stations maintained by the Massachusetts Highway Department. These locations are counted hourly 365 days a year. All of the permanent counters are located on state and interstate roads. Additional 1991 ADT data became available from MHD during the preparation of this report and have thus been included.

Using this Data

The following example shows the format by which the traffic count data is presented:

Facility	Route	Location	Station	Dir.	1981 . . .
AGAWAM					
Barry St.	**	Southwick T.L.	4407	EB	519
Main St.	159	Connecticut S.L.	2197	**	4903
Suffield St.	75	S/O 147	7097	**	574

Facility identifies the street or roadway name. *Route* is the state or federally designated highway number if applicable. The column labelled *Location* identifies the traffic counter's location in relation to the nearest intersection or political boundary. A station number is assigned to each count site and also indicates the source of the data. Station numbers beginning with a 1, 2, or 3 are those counts that were done for the Massachusetts Department of Public Works (MDPW). The station numbers starting with a 4 or 5 are traffic counts completed by a community on their own. Station numbers starting with a 6 were counts compiled by an outside private concern. Annually the Pioneer Valley Planning Commission provides traffic counts at the request of communities and area businesses. These station numbers begin with a 7, 8, or 9.

The column *Dir* indicates which direction the traffic is moving. The traffic volume listed is for travel in both directions unless otherwise noted by EB (eastbound), WB (westbound), NB (northbound), and SB (southbound). A traffic count number shown in a ***bold-italic*** typeface represents a number that has not been seasonally adjusted. To adjust an ADT count, statewide historical data for

roads of similar type is applied to account for seasonal variations which occur because of the day and time of year when the actual count was taken.

Traffic Services Available

This report contains a sampling of the data maintained by the Pioneer Valley Planning Commission. Additional statistics as well as other traffic indicators such as turning movements, average speeds, accident data, and truck transportation are available by contacting the Pioneer Valley Planning Commission.

The Commission also offers public and private organizations a reliable traffic counting service with state-of the-art monitoring equipment and traffic analysis capabilities.

For more information or to inquire about transportation, land use, demographic and economic data services contact:
